

REMARKS

The applicants respectfully disagree with the Examiner's rejections set forth in the present office action. However, desiring to expedite the issuance of a patent for the present invention and in view of the Examiner's indications of amendments that would confer allowance, the applicants have attempted to amend the claims in at least partial accordance with the Examiner's suggestions. Specifically, in addition to rewriting claim 5 as independent claim 1, the steps of modulating and transmitting have been removed (although much of the language has been moved to the preamble) to clarify that the method is a method for a receiving device. Also, regarding the objection to claims 7 and 15, the applicants submit that "M" may be understood in view of the terminology explained in the paragraph beginning on page 1, line 22 of the application. No remaining grounds for rejection or objection being given, the claims in their present form are asserted to be patentable over the prior art of record and in condition for allowance. Therefore, allowance of this case is earnestly solicited.

The Examiner is invited to contact the undersigned, if such communication would advance the prosecution of the present application. Lastly, please charge any additional fees (including extension of time fees) or credit overpayment to Deposit Account No. **502117 -- Motorola, Inc.**

Respectfully submitted,
G. Agami et al.
